

Utility Tank

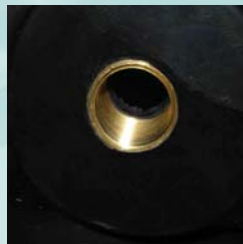

1500 Litre Tank for Multiple Rainwater Applications

1500 Litre Utility Tank

This truly versatile tank can be utilised in a whole range of rainwater harvesting applications. With a small footprint and a massive capacity of 1500 litres this tank enables large scale rainwater harvesting where underground systems are inappropriate or undesired. This tank would happily sit along a garden path or installed in a garage or basement. Due to its modular nature it can be installed in plant rooms servicing multiple occupants or businesses. These tanks offer Rainwater Harvesting solutions where they were thought never possible before.

Also available packaged with the 3P Filter Collector and Garden Steel pump to create an above ground system.

The Garden Steel pump connects to the 3/4" brass threaded BSP outlet via the 3P Connector Kit

DN50 2" Connection Point.

Specification

Capacity	1500 litres.
Dimensions	1200 x 780 x 2000 mm
Weight	85 kg
